**ZeToon**

Citation :

Je tâcherai de faire ca petit à petit, au fur et à mesure, et au mieux  
Chouette, merci d'advance :)!

Ce serait bien que les personnes qui commentent prennent quelques secondes pour afficher une capture d'écran, ça faciliterait le travail de ZeToon...

du genre :

**Nom du plugin**

Exemples :

.....

**RESYNTHESIZER**, de Paul Harrisson

.....

[Site](#)

[Tutoriel](#)

*Resynthesizer is a Gimp plug-in for texture synthesis. Given a sample of a texture, it can create more of that texture. This has a surprising number of uses:*

- \* Creating more of a texture  
(including creation of tileable textures)*
  
- \* Removing objects from images  
(great for touching up photos)*
  
- \* Creating themed images  
(such as the Resynthesizer logo above)*

.....  
**LIQUID RESCALE**  
.....

[Site](#)

*It is a free, open source frontend to the Liquid Rescale Library, which provides an implementation of the Seam Carving algorithm as described in this paper by Shai Avidan and Ariel Shamir.*

*The Seam Carving procedure aims at resizing pictures non uniformly while preserving their features, i.e. avoiding distortion of the important parts.*

*The plugin supports manual feature selection, and can also be used to remove portions of the picture in a consistent way.*

*Since version 0.6 it also supports real-time interactive scaling.*

*Have a look at the [Examples](#) section to get an idea.*

Pour ceux qui veulent contribuer, je vous ai fait un template, suffit d'enlever les espaces inutiles dans les balises :
