Citation :

This reminds me of the new Projection painting in blender! 2 very similar techniques at pretty much the same time...

Dr Petter \_ Yes! Actually I saw a video of that new Blender projection paint just yesterday, on a forum thread that linked to my site (I found it through came-from statistics). I also saw some video on vimeo I think it was, a couple of weeks ago. That was in some other application. For the record, I did think of this general technique myself in December of last year. It's kind of obvious though, so I'm sure there have been many different implementations over the last 20 years.

Citation :

@Ladeheria \_ On peut déjà faire ça dans Blender avec le Bake

Oui, mais ça n'empêche pas que les petits softs dédiés se révèlent parfois plus efficaces et utiles que les intégrés (Mapzone, XNormal, SSbump, etc...), et il y a toujours le bénéfice de la recherche et de la diversité qui crée l'émulation...
